#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 2. Claims 16-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 3. Claims 16-20 provide for the use of a liquid fraction, but, since the claims do not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 16-20 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

## Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/622,564

Art Unit: 1724

5. Claims 1-5, 8-11, 14-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ainsworth et al. (US Pat No. 6,299,774).

Ainsworth et al. teaches treating swine manure (col. 4, line 4) anaerobically to produce methane and hydrogen sulfide (col. 6, lines 58-67), separating the treated manure into a liquid fraction and a solid fraction (Fig. 2), using the liquid as a fertilizer (col. 9, lines 49-51; col. 10, lines 57-60), drying the solid fraction (col. 9, lines 52-62) and using it as an energy source, and using the methane as an energy source (col. 3, lines 11-14) after removing the hydrogen sulfide from the methane (col. 6, line 67 and col. 7, lines 1-2).

## Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 6-7 and 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ainsworth et al. ('774).

Ainsworth et al. is described above. Ainsworth et al. do not explicitly disclose whether the solids are dried before or after the liquid is used as a fertilizer or the exact percentage of hydrogen sulfide removed.

Application/Control Number: 10/622,564

Art Unit: 1724

It would have been obvious for the skilled artisan to dry the solids at a time convenient for processing in order to optimize energy derivation from the solids, depending on the desired results.

Regarding the percentage of hydrogen sulfide removed, it is conventional in the art to remove an amount of an undesirable gas from a product gas depending on the desired use of the product gas and the environment in which the methane will be used to avoid malodor and corrosion of downstream equipment. Accordingly, it would have been readily obvious for the skilled artisan to have removed the specified amounts of hydrogen sulfide gas in order to, for instance, avoid malodor in the environment and corrosion of downstream equipment.

#### Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References are cited of interest.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fred Prince whose telephone number is (571) 272-1165. The examiner can normally be reached on Monday-Thursday, 6:30-4:00; alt. Fridays 6:30-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on (571) 272-1166. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
